

## my response to Raihan's latest post

In his "a response to all" Raihan at last acknowledges- his argument was NOT based on science. ["Sorry! My write-up was based on logic, rationality & philosophy, NOT on science though I mentioned a few scientific points," he said.]

Surpirisngly, he goes mad at us when we said the same i.e. his write up was NOT scientific. See how he reacted:

"ANYONE after reading my write-up shall understand that the essay is based on a possibility from a logical, rational and pragmatic viewpoint. Yet almost all of them (as if each of them were a great scientist!) tried to confuse the readers and **prove it unscientific**, irrational in the name of science. At last, we find, there is no BIG scientific error or confusion! Are people so fool! **Except for a few here & there (Einstein's philosphoy, Amoeba)**, the quality of the write-up remains more or less SAME."

My coments: You said "ANYONE" can understand yet "ALMOST ALL of them" tried to confuse readers??? Who is "anyone" and who are "almost all"? If you're so confident about readers, why worry so much?

I'm not going to respond to Raihan's most comments that are directed to me since readers can judge it for themselves. Instead of attacking my write-up, he tried to attack me personally like he think, I did lots of "unethical things" [ku-kirti] as a thiest in the past. Will he show some proofs? **Or is it counter-proof in itself toward what Raihan said earlier "belief in a creator makes a man humble, decent"??**

If not Raihan, seems to me, his friend has been driven crazy by my response ("my friend threw away Jahed's argument" as Raihan admitted). But isn't a proponent of 'single creator' supposed to be a "modest, humble and raional" mind? Why is this failure, Raihan?

I don't intend to win every point in a debate. I'd be happy though at least from next time onwards, if Raihan stops misquoting Einstein in his own defense.

To the suggestion which Avijit has already passed on to him (i.e. reading more books on how science works, philosophy of science) I'll just add: reading alone cannot help. Make sure, your mind is also active while reading something.

Thanks.  
Jahed
